LIBERTY SAILS NEW

LX FOIL LIGHT NEW

LX7 FOIL LIGHT was born as the world's first zero-cam FOIL slalom sail in 2020 based on the design of the zero-cam slalom sail that was established with LX7. The 2021 model introduced 8.0 and 5.0 due to strong requests from users. To pursuit of stability at higher speeds, 7.0 and 8.0 have been changed to 7 battens. The sail material is lightweight and high- strength of X-PLY similar to LX7, which is possible to reduce damage to the sail during sail-up among FOIL beginners and intermediates. Of course, the batten is a FOIL exclusive design which is applied from the Liberty custom batten.

LX SEVEN 2021

LIBERTY is providing carbon batten to PWA athletes since 2017. They are seeking stability in strong wind condition and more power in light wind condition but those are mutually exclusive. LX7 featured hard and deep tapered carbon batten makes sail form stable which causes wind current smooth in both strong and light wind. Ideal wind current by stable sail form maximize top speed. LIBERTY sail adopts this advanced carbon batten to all sail size.

LIBERTY CUSTOM BATTENS NEW

THE LIBERTY CUSTOM BATTENS is used and proofed by Julien, Arnon, Mateus and Antoine at PWA competitions. Custom batten is able to increase controllability on high wind and conserve sail power in light wind condition. LIBERTY CUSTOM BATTEN realizes sail draft stability by double strength carbon tube ,three times compare to grass-tube, and deep taper design in high winds. Stable sail draft helps smooth acceraration and maintain speed in light wind condition. You could see those effectiveness in both cambered and non-cambered sails.

LIBERTY SDM MASTS

Further flexible combination mast!
Liberty carbon mast could be coupled with various combination. Different carbon percentage bottom and top could be combined. (e.g. 460/100% bottom and 430/80% percent combination) Mast could be arranged with 15cm step.

Bottom piece hold wind power while top piece flexibly reacts to bluster. LIBERTY SDM carbon mast is able to match-up with various sail by multi bend curves. 100% and 80% are able to purchase bottom and top separately.

LIBERTY CARBON HARNESS

XO CARBON CONTROL

"XO CARBON HARNESS" have established a whole new category. It is the third harness that solves the problems of WAIST HARNESS and SEAT HARNESS. While keeping the flexibility of the lower body, it pulls in the sail firmly with the lower body like a pants harness, and it also enables support of the upper body (back). The XO CARBON HARNESS has made this seemingly contradictory function compatible. This harness made efficiency and comfortability. The HOOK position is located between WAIST and SEAT HARNESS.
